truMe

Global Identity and Access Management System

truMe for Meeting Rooms

truMe: An Introduction

truMe is an IoT based Identity & Access Management Platform. It's an elegant and cost-effective solution to the various access related questions. truMe leverages a number of technologies to create a product that is extremely easy to use both for the establishments and the individual users. Unlike the legacy Access Management Systems, which are standalone and are completely dependent on hardware, truMe is a state-of-the-art platform, which ensures great flexibility to write access rules, gives real-time visibility to access events and has in-built reporting & data analytics.
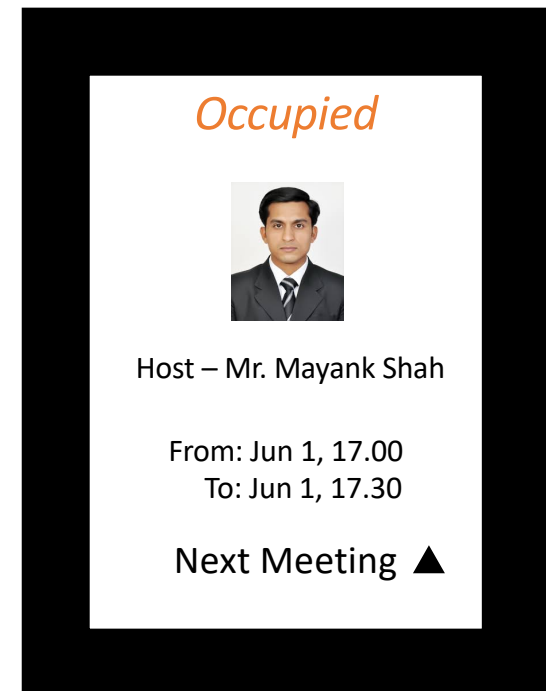

The truMe Advantage

- Orderly, uninterrupted and productive use of the Meeting Room spaces

- Staff books Meeting Rooms from their O 365/ gmail directly; No friction

- Meeting room booking and usage status available on a tablet right outside the meeting room

- On need basis, the Meeting Room door can be controlled – Only the person/s authorized for a particular time can open the door by scanning a QR code put on the door

- Admin has complete visibility on usage of the meeting rooms across office/ locations

- Data analytics and reports on need basis

truMe: How it Works

- Authorized person sets up a meeting in O 365/ gmail in a particular meeting room
- truMe automatically pulls the details from O 365/ gmail
- A tablet placed just outside the meeting room shows whether the room is occupied, or a meeting is in progress. It also shows the schedule for the entire day as the viewer taps on "The Next Meeting" button
- The tablet also has a QR code and a QR code scanner at the bottom. These can be used to identify the authorized user and capture data of actual usage, if need be.
- If client desires, truMe can create a UI whereby a meeting can be booked from the tablet itself.

Occupied

Host – Mr. Mayank Shah

From: Jun 1, 17.00
To: Jun 1, 17.30
